Do You Know?

We often think of children getting poisoned. But most people who die from poisons are adults! Poisoning is a danger for all of us.

Almost anything can be poisonous if it's used the wrong way, in the wrong amount, or by the wrong person.

Some poisons are:

- medicines (prescription, over-the-counter, herbal) and street drugs
- products in your home like shampoo, bleach, bug and weed killers, antifreeze, and lamp oil
- chemicals at your job
- bites and stings
- mushrooms and plants
- fumes and gases

Taking the wrong amount of medicine or someone else's medicine, accidentally eating dishwasher soap, mixing cleaners, or having too much alcohol to drink could lead to poisoning.

Why Should You Call?

Poisonings can happen to anyone and poison centers are for everyone. The call is free and private.

We Help You Save Money and Time:

Seven of ten people who call their poison center get help over the phone. They don't have to go to a doctor or hospital.

Your Doctor Calls the Poison Center Too:

When doctors and nurses need help treating poisonings, they call their local poison center.

We are the experts.

Poison Prevention Tips

If you think someone has been poisoned, call 1-800-222-1222 right away. Serious poisonings don't always have early signs.

- Put 1-800-222-1222 in your cell phone and near home phones.
- Keep medicines and household products in their original containers and in a different place than food.
- Always read the label and follow any directions.
- Keep household products and medicines locked up. Put them where kids can't see them or reach them.
- Buy products with child-resistant packaging. But remember, nothing is child-proof!
- Never call medicine "candy." Poisons may look like food or drink. Teach children to ask an adult before tasting anything.
- Learn about products and drugs that young people use to get "high." Talk to your teen or pre-teen about these dangers.
- Have a working carbon monoxide alarm in your home.
